QA Intern

Internship place: Kaunas

Summary:

The Quality Assurance Intern will be responsible for contributing to our Automation tests effort in addition to minimal manual testing of our cloud management product. The Ideal candidate must have an interest in test Automation, strong problem solving skills, attention to detail and a strong work ethic.

Responsibilities and Essential Duties:

- Participate in the creation of a suite of automated regression tests.
- Convert manual test cases that enable verification of product requirements into automated test code.
- Enter detailed defects in the defect tracking system.
- Isolate the root cause of a defect when possible.

Education and/or Experience:

- Pursuing a degree in Engineering or Computer Science.
- Experience with virtualization platforms and tools such as VMware and MS Hyper-V is a plus.
- Some coding experience in C# (preferred) or JAVA.
- Any experience writing unit tests (NUnit, Junit or other sort of automated tests).
- Any experience with automated web testing tools, such as Selenium is a plus.

The successful candidate will:

- Be able to work effectively in a business setting.
- Be dynamic and creative – with a desire to work in a rapidly evolving organization.
- Display good time management skills.
- Work with enthusiasm and drive.
- Demonstrate the ability to meet deadlines.
- Demonstrate strong written and oral English skills.
