

## **QA build/deploy Intern**

**Internship place: Kaunas**

### **Summary:**

The Quality Assurance Intern will be responsible for contributing to our build/upgrade tests effort in addition to our cloud management product. The Ideal candidate must have an interest in test build/deploy infrastructure, strong problem solving skills, attention to detail and a strong work ethic.

### **Responsibilities and Essential Duties:**

- Participate in the creation of a suite of automated regression tests.
- Convert manual test cases that enable verification of product requirements into automated test code.
- Enter detailed defects in the defect tracking system.
- Isolate the root cause of a defect when possible.

### **Education and/or Experience:**

- Pursuing a degree in Engineering or Computer Science.
- Experience with virtual testing environments such as VMware and MS Hyper-V is a plus.
- Good knowledge of TCP/IP stack, Networking etc.
- Experienced Linux CLI user
- Some development experience in .Net and C# preferred (or JAVA/C++).
- Scripting (groovy, bash)
- Any experience writing unit tests (NUnit or similar, Python unit test or similar).
- Any experience with automated web testing tools, such as Selenium is a plus.

### **The successful candidate will:**

- Be able to work effectively in a business setting.
- Be dynamic and creative – with a desire to work in a rapidly evolving organization.
- Display good time management skills.
- Work with enthusiasm and drive.
- Demonstrate the ability to meet deadlines.
- Demonstrate strong written and oral English skills.
