

Java Search Engineer Internship

Position

KAYAK is looking for smart, enthusiastic developers with focus on backend and Java to help expand our industry-leading website to the global market. We integrate with over 200 travel partners and link to over 800,000 hotels, 500 airlines, and 60,000 rental car locations. Our team is an essential part of the high powered search team by creating and maintaining search engine architecture, integrating new partners APIs, providing accuracy and competitiveness data, helping engineering and business derive actionable insights.

Responsibilities

Writing clean, efficient, and readable code

Maintenance of the existing API integrations

Maintenance of the search accuracy tools

Participate in the design and development of new solutions as well as architectural improvements

Qualifications

On road to Bachelor's degree or higher in computer science or related field

Strong computer science background, understanding of fundamental algorithms, data structures, and performance optimization

Hands on and self-motivated

Eager to learn

Analytical mindset and excellent problem solving skills

Excellent technical communication skills

Eager to understand organizational priorities and business direction
